## Manual Lift Handle Kit Assembly Instructions

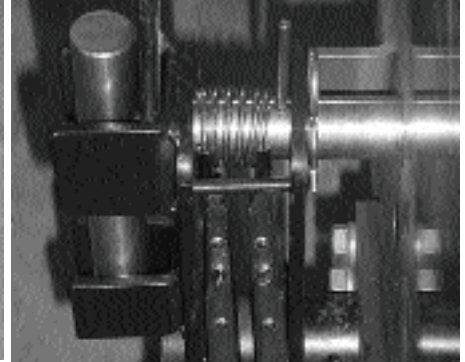

Step One:

Compress spring together with an air-cooled valve spring compressor. Place the handle in position and slide T-bar through the handle, wheel kit and unit.

Step Two:

With the spring still compressed, tap roll pin into the hole on the T-bar that is closest to the spring.

Step Three:

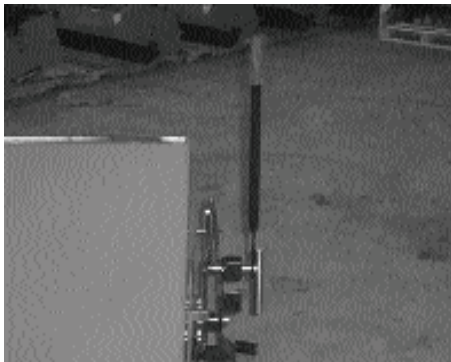

Once the roll pin is completely installed, slide the hairpin into the hole, on the T-bar, that is closest to the unit. Release the spring.
